

Perspective VMS from LENSEC supports an open-architecture camera model configuration. Perspective VMS' **Universal Camera Model Driver** allows users to define or setup custom camera model configurations via HTTP or RTSP command strings.

Perspective VMS also offers default database support for the below camera models. This support may include Motion-JPG and H.264/MPEG4 video streaming (where supported). The connection to IP-based cameras is typically handled via a direct HTTP or RTSP command syntax.

Any camera not listed in the default database can be requested for addition by providing API documentation or simple text to LENSEC which contains command syntax (CGI or RTSP) for Image / Snapshot, Motion-JPEG, and/or H.264 video.

This listing is current as of Perspective VMS Version 2.7.0 Release.
